100 Facts About Egypt N° 90

A system of canals being built in Egypt will create 2.8 million new jobs and increase Egypt's arable land area by 20 percent.

- The New Valley Project (also known as the Toshka Project) will build a new system of canals to carry water from Lake Nasser to irrigate

Egypt's Western Desert.

- The Mubarak Pumping Station, pictured above, is the centerpiece of the project. The pumping station draws water out of Lake Nasser and directs it into Sheikh Zayed Canal, which runs from Lake Nasser to the Western Desert.
- The New Valley Project will help the country cope with its rapidly growing population by producing more inhabitable land, creating an expected 2.8 million new jobs and attracting over 16 million people to the new towns planned in the region.
